## The Precious Metals Cycle

With our recycling management services, we support you in reintegrating production residues into your precious metals cycle. We process your material and provide the resulting value according to your requirements: as a delivery of fine metals or products, as a precious metal credit to your metal account, or as a purchase with payment to your bank account.

As a system supplier, we offer a comprehensive range of services along the precious metals cycle and support our customers with individually fitting solutions.

*Agosi is part of the Umicore Group, headquartered in Brussels. Umicore combines expertise in materials science, chemistry and metallurgy and operates in the business areas of Battery Materials, Catalysis, Recycling and Specialty Materials. Together with its affiliated companies in Austria, Thailand, North America and South America, Agosi forms the Jewelry & Industrial Metals business unit within the Umicore Group. Its portfolio includes precious metal services, semi-finished products, trading products and refining services for the precious metals processing industry.*

*Agosi is certified according to the Responsible Jewellery Council's Chain of Custody Standard (RJC CoC). In addition, the company holds the LBMA recognitions „Responsible Gold" and „Responsible Silver". Thus Agosi can offer certain precious metal products according to the respective standard requirements.*

Certificates are available online www.agosi.de.
The current General Terms and Conditions apply (www.agosi.de/download).

# Refining Precious Metals

## Scrap gold, scrap silver, precious metals bearing materials

# AgosiRefining

## At Agosi, your material is handled with care and expertise

More than 2,000 tons of material bearing precious metals from more than 20,000 deliveries per year to our company speak in our favour.

With this refining capacity, Agosi ranks among the biggest refineries in Europe.

When processing your orders, Agosi places a strong focus on reliable and diligent processing.

## Systematic refining ...

Each batch size is handled separately for each customer and for each material. Every step from homogenisation by melting or preparation, through sampling and analysis to accounting are carried out separately from other customers' orders, and are documented accordingly.

Process documentation supports the traceability of the refining process. In line with our General Terms and Conditions, Agosi retains a sample of each scrap delivery after homogenisation.

## ... for your use

Depending on your requirements, the precious metals we recover are available to you in the following ways:

›› We credit the precious metals to your weight account

›› You sell your precious metals to Agosi at current market prices

›› You receive the precious metals physically (as bars, granules or semi-finished products, depending on your requirements)

## Worldwide connections

Our metal trading department is always connected online with the most important international marketplaces and offers services such as the purchase and sale of precious metals, price hedging, financing, bank transfer payments and the physical delivery to a recipient of your choice. As our team is available during trading hours, we are able to react quickly to market movements on the basis of current market rates for invoicing and settlement.

At www.agosi.de you can see detailed information on current prices, fixing rates and rate fluctuations for all common precious metals.

# AgosiServices

## Efficient recovery of precious metals

We would be happy to give you individual advice at your premises about possibilities to improve your handling of scrap materials and about their collection and transportation.

Together with you, our customer, Agosi experts will inspect your precious metals bearing materials and will make recommendations on the basis of your particular requirements. Together we will explore how best to sort the materials into cost-effective batch sizes and at what intervals they should be delivered to us.

Agosi has built longstanding relationships with customers in the precious metals industry. Our business is based on transparent processes throughout the refining cycle. With short lead times and modern technologies, Agosi is able to provide you with your precious metals in a timely manner.

# AgosiCollection

## Safe transport using the Agosi Safebag and Safebox

Our safety package not only offers your material physical protection against loss, but also means that your consignment has insurance cover.

We will provide you free of charge with the container best suited to your needs, depending on the type and the amount of material you have:

›› Safebag and Safebox (500 ml or 850 ml) for scrap

›› Sealable container capable of holding approx. 50 l for sweeps

›› iron barred box with 500 l capacity for bulk materials

We will send a freight carrier to your premises to collect your sweeps and your bulk materials. We can offer you security transportation or a courier service for scraps with gold content. Your consignment is insured with us during transportation.

Please call us or send your requirements.

# AgosiPreciousMetalsServices

## Certified Precious Metals

In the field of precious metals, Agosi plays an important role as a refinery supporting precious metal recycling and recovery processes, manufacturer of semi-finished products and supplier of raw materials, namely gold, silver, platinum and palladium.
Based on RJC certified Chain of Custody Standards for Gold and PGMs, Agosi is the first German precious metals company to offer RJC Chain of Custody certified products covering raw materials, CoC fine metals and CoC semi-finished products. Agosi fulfils the requirements laid down by the Responsible Jewellery Council, the Conflict-Free Smelters List (RMI) and also the criteria of the Responsible Gold Guidance of the London Bullion Market Association (LBMA). In addition to that, Agosi is accredited according to LBMA Responsible Silver standards.

## LBMA Accreditation

Agosi AG is a member of the London Bullion Market Association and an accredited supplier of Good Delivery bars in fine gold (400 oz = approx. 12.5 kg) and fine silver (1000 oz = approx. 31.1 kg).

In order to meet the growing demand for silver as an investment product efficiently on a large scale, 1000 oz bars in fine silver are produced using an automated casting process.

Agosi's investment product programme does of course also include bars in smaller denominations. On request, the bars can be individually stamped, for example with the customer's logo.

# AgosiBaseMetalServices

Agosi's Base Metal Services division is well equipped to turn valuable production scraps out of non-ferrous metals, steel and stainless steel back into raw materials suitable for industrial applications. We offer the complete recovery cycle starting with stamping scraps right through to materials for production and deliver base metal semi-finished products as strips, sheets, cuttings and wires and as crude and alloying metals - a wide range of materials, combined with recycling methods focused on material recovery and resource efficiency.
Our Base Metals Services division is also certified as a waste management company. Modern recycling management means not only fast and flexible waste management services but also a processing system that is appropriate for the materials and that supports the recovery and reuse of materials. This is all the more important since the base metals market is experiencing a significant increase in the prices for raw materials.
