Our most valuable assets - Find the job that is especially for you!

Our employees are the guarantors of success for our company. We accompany them along the way and offer them and our management staff competent advice and individual opportunities for their personal development. Our inhouse training for our junior staff has been an important element of our activities for years. At present apprentices are trained in 9 different qualified jobs. We offer qualified and extended professional programs with a broad range of tasks and perspectives.

- OPENNESS
- INNOVATION
- TEAMWORK
- RESPECT
- COMMITMENT

"Enable!" – this is our HR-philosophy in a nutshell. It is part of our strategy to achieve a well-balanced personnel development that provides a supportive environment for present and future employees and for the harmonization of private life, life at work, and of family and job in general.

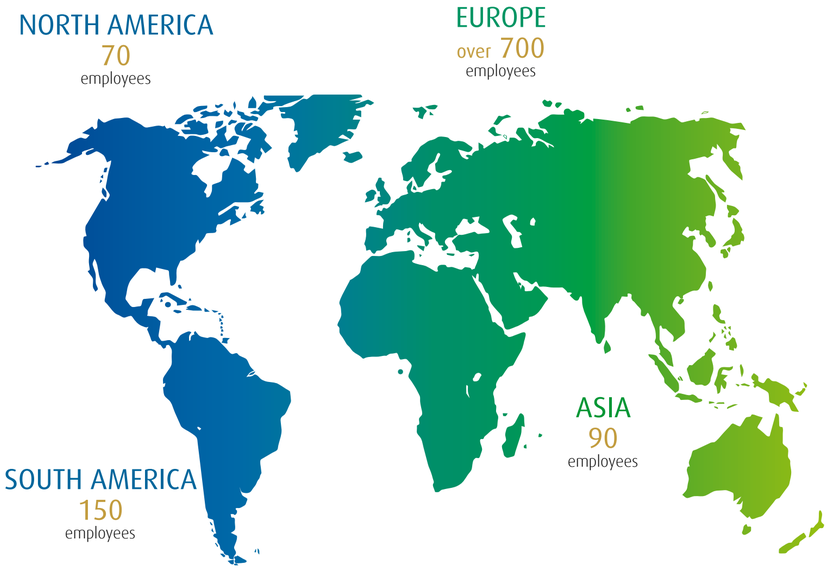

In this we are guided by the "Umicore Way", which describes the central principles of our company – our vision that motivates us and our values that characterize both the interactions here at Agosi and with our business partners.

Agosi adheres to collective wage agreements and thus offers competitive social benefits and professional training opportunities. We encourage a trusting working atmosphere and long-term employment opportunities.

Your Partner for Precious Metals

Traditionally anew - The Agosi Precious Metals Cycle

For more than 130 years Agosi has been active as a recycler for precious metals. Situated in Pforzheim/Germany, in one of the key areas for the jewelry and watch making industry, our company has specialized both in refining and in manufacturing semi-finished precious metals products. Based on many years of experience and extensive processing capacity, Agosi is an established company in the European precious metals industry. As a shareholder company, our activities are published regularly.

The Precious Metals Cycle – from Residue to Raw to Pure

Agosi offers recycling solutions for precious metals from secondary sources. This means that we process materials with precious metal content coming from manufacturing industries. The precious metals then become the raw materials for new products.

When dealing with precious metals, maintaining their value is a decisive cost factor. Therefore it is important to work with an experienced partner for the refining process. Agosi supports customers throughout this process, offering semi-finished products and fine metals for a variety of applications. Our range of services spans the precious metals cycle.

Ideal Products for Industry, Jewelry and Crafts

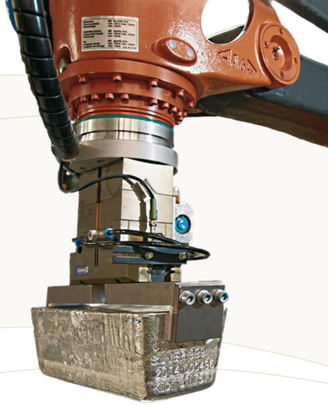

Agosi products are used by companies in the jewelry, watch, and coin industry – as well as in industrial applications in electrical engineering, automotive manufacturing, the chemicals industry and medical technology.

Among our customers are goldsmiths and small-scale workshops as well as highly specialized and technologically advanced companies. Our products with their specific properties meet the needs of many different requirements and are tailored individually to the customer's demand.

Agosi also deals with a wide spectrum of base metals both as scraps and as semi-finished products in various forms and sizes. This is another core element of the metals cycle for the industries active in the base metal sector.

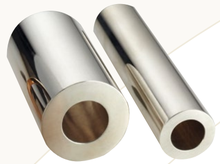

Raw Materials – Confidence and Responsibility

Today, resources are more valuable than ever. As the demand for precious metals has risen, even low-grade deposits, previously considered commercially unviable, are being mined, which may involve environmental and social challenges. Therefore precious metals from secondary sources have become increasingly important.

Agosi combines economic activities with a commitment to responsible business practices. For this reason, Agosi is not only a CoC-certified member of the RJC (Responsible Jewellery Council, London) and considers relevant LBMA (London Bullion Market Association) requirements within its processes.

Our memberships and certifications reflect our commitment to these standards.
